

CLASS 5 - OXIDIZING SUBSTANCES AND ORGANIC PEROXIDES

	Division 5.1 – Oxidising Substances. - Substances not necessarily combustible, but may generally, by yielding oxygen, cause or contribute to combustion of other material.
	Division 5.2 – Organic peroxides. - Thermally unstable substances which may undergo exothermic, self-accelerating decomposition. May also have one or more of the following properties: liable to explosive decomposition; burn rapidly; sensitive to impact or friction; react dangerously with other substances; cause damage to the eyes.
